

# PIERBURG – Fuel Supply and Service

Get to know the range and technology of PIERBURG

With this special seminar we provide you with practically oriented information on the structure and components of modern fuel systems, you get to know how to process works when looking for faults and have recognised that system and product knowledge is the precondition for successful work on the fuel system, too.

**This offers a great chance for sales and workshops!**

## Seminar contents:

- Structure and function of modern fuel systems, fuel pumps, pressure regulators and valves
- Testing of the injection system by using the fuel injection pressure test set (theory)
- Defects, possible causes and remedies
- Classic mistakes resulting from a lack of system knowledge (with current examples from practice)

## Objectives:

The participants ...  
 ... are provided with practically oriented information on the structure and components of modern fuel systems.  
 ... know how to proceed when looking for faults.  
 ... have recognised that system knowledge is the precondition for successful work on the fuel system, too.
