

# PIERBURG – products, systems and more

Get to know the range and technology of PIERBURG

With this special PIERBURG seminar we will introduce the modern product range of a leading car supplier, the systems and the techniques behind it. Being one of the leading car suppliers for Emission control, Air supply, Vacuum controlled products, Fuel supply and many other components, the PIERBURG brand is in nearly every modern car.

In modern passenger cars all emission relevant systems and components, like the PIERBURG ones, are monitored by the On-Board-Diagnosis (OBD).

These parts become conspicuous and a repair needs to be done.

**This offers a great chance for sales and workshops!**

During this seminar you will not just get to know the product range better, but also learn more about the advantages that you as a wholesaler and/or workshop have.

Modern components, like these of PIERBURG, offer a great deal to all.

## Seminar contents:

- Introduction of the PIERBURG product range.
- System knowledge for following product ranges:
- Exhaust Gas Recirculation (EGR) Systems, Air Mass Sensors,
- Secondary Air Systems.
- Basics and benefits of On-Board-Diagnosis for your daily business.
- Possible malfunction, trouble shooting and possible failure causes with practical examples of classical mistakes.
- Introduction of technical PIERBURG brochures and technical PIERBURG information to help you during your daily work.

## Objectives:

The participants ...

... know the PIERBURG products and can use this information for their daily business.

... have got system knowledge and know how the components work together in a system.

With this know-how you can give a better service to your customers.

... have recognised that being up-to-date on technical training is essential for the future.
